## DETECTABLE RANGE

### Detectable Products Can Prevent Serious Consequences

Food safety requirements are more demanding than ever, and certain standards (e.g., BRC) require mandatory detectable products in the food and brewery industries.

Poor product management and subsequent quality control can have serious consequences. Product recalls due to unidentified objects found can incur significant financial costs and simultaneously position a company/brand as unprofessional and unreliable.

## MICROFIBER CLOTH SUITABLE FOR FOOD PRODUCTION

Satech Cloth can be used in food packaging due to its breathable structure and good moisture management properties.

It is a highly effective bacteria filter and does not shed, ensuring that the packaged material is not contaminated with microorganisms or synthetic microfibers.

It can be treated to impart hydrophobic properties and UV resistance.

It does not contain any binders or solvents.

Its components comply with Regulation 935/2004/EC concerning materials and articles intended to come into contact with food.

**It is Produced in Five Standard Colors:** White - Blue - Red - Yellow - Green

**Satech Cloth** does not contain volatile organic compounds (VOCs) such as PVC, binders, or solvents, which can pollute and degrade air quality and pose health hazards.

**OEKO-TEX®**  
CONFIDENCE IN TEXTILES  
**STANDARD 100**
